

Dipslide Incubators

For Incubation of dipslides

Delivering simplicity and affordability through innovation.

For small applications we recommend the GNAT which holds 2 dipslides and is preset to 30 °C. We also offer a modified GNAT ideal for both NRB and SRB tubes that is preset to 35 °C.

For medium applications use the ORION which holds 8 dipslides or the DISCOVERY which also holds 8 dipslides. Both are highly portable with the ORION being preset to 30 °C and the DISCOVERY supplied with a built in temperature gauge and an adjustable temperature range.

Our most popular site based incubator is the CULTURA which holds 18 slides. It comes with a tray, temperature gauge and adjustable temperature. Only supplied with 240v supply.

For medium to large applications use the CHALLENGER which holds 25 slides. It has a built in temperature gauge, variable temperature setting and also works on multivoltage.

For large applications use the RANGER which holds 45 slides and many other microbial tests. It has a built in temperature gauge with an adjustable temperature and also works on multivoltage.

Incubator Order Codes :

Name	Code	Number of dips
Gnat	EDT057	2
Orion	EDT380	8
Discovery	EDT055	8
Cultura	EDT059	18
Challenger	EDT052	25
Ranger	EDT093	45

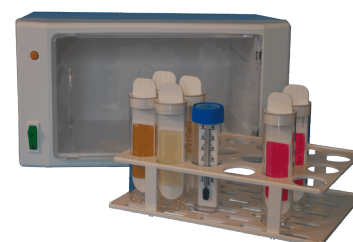

2 slide - Gnat

8 slide - Orion

8 slide - Discovery

18 slide - Cultura

25 slide - Challenger

45 slide - Ranger

The Gnat, Orion Discovery, Challenger and Ranger can all be supplied with an optional 12v leads for use in cars.

FOR ALL DIPSLIDE & TUBE TEST RECORDING & REPORTING USE OUR DIPSLIDE COMPARATOR APP FOUND ON THE APPLE & ANDROID STORES SEARCH FOR "DIPSLIDE COMPARATOR" ON BOTH APPLICATIONS
